

NAMZ Turn Signal "RTI" Harness Kit
Part Number: NTSH-2402 & 3602

Installation Instructions:

1. BE SAFE, DISCONNECT THE BATTERY FIRST!
2. Our harness comes with installed 6-Position Multilock connector.
3. Remove the fuel tank(s) from the motorcycle and locate the turn signal harness connector. (*'96-Up use (1) 6-position Multilock connector with 2-violet, 2-black and 2-blue wires connected to it.*)
Earlier models will need to be spliced into harness between fuel tanks.
4. Once disconnected, remove lenses, bulb and pull out light reflector.
5. Cut factory harness at grommet in turn signal. *NOTE: You may want to connect NAMZ harness to the main harness and route wires before you move to Step 6.
6. Insert bare end of NAMZ harness into light housing and splice wires using butt-connectors, included. (White to Blue, Red to Violet and Black to Black)
7. Once both lights are connected, re-install reflector pressing evenly on all sides.
8. Install bulb and lens. Be sure to test turn signal functions before re-installing tank(s).
