

BADLANDS Victory ILL-IND-FR Front RUN/TURN™ Module with LOAD EQUALIZER

Thank you for purchasing a Badlands Illuminator Module! We're sure that you will be completely satisfied with the performance and ease of installation of your new module. Before you get started, PLEASE read these instructions and helpful tips so that you understand how to install your module correctly. An improper installation will void the warranty.

FEATURES: This Badlands, Indian Run/Turn Module is designed to combine running light and turn signal functions to each front turn signal through (1) wire per side. The ILL-IND-FR run/turn module is 100% Plug-N-Play and comes with labels on each connection for easy installation. Our module has a built-in Load Equalizer which will prevent a "rapid-flash" turn signal or indicating light. Now you understand the features of our Illuminator Module, let's talk about installation.

PLUG-N-PLAY: This module is 100% Plug-N-Play with the proper connectors pre-installed and labeled. The wiring colors on our Run/Turn Module are defined in the color chart below (bottom left corner). The fused ORANGE wire on our module MUST be connected to a KEY ON POWER, and Black wire connects to GROUND. This connection is already made in a convenient Plug-N-Play connection to the bike. **DO NOT CONNECT THE ORANGE FUSE WIRE TO CONSTANT POWER OR YOUR LIGHTS WILL STAY ON AND DRAIN YOUR BATTERY**

INSTALLATION: The ILL-IND-FR module offers Plug-n-Play technology, making installation quick and easy. Simply remove your front fairing, locate your left and right turn signal wiring, plug our module in between. Connect the Key On (+) Power & Ground connection to your bike's accessory connection (*also located inside the front fairing*), and your done.

(NOTE, ILL-IND-FR is intended for all 2014-Up Indian Models, EXCEPT Scout)

ILL-IND-FR: Plug-n-Play Indian Illuminator™ Front Run/Turn Module (Fits all 2014-Up Models, EXCEPT Scout)
